

SISDP Database Utilization - Success Stories

Space based Planning for Watershed Development under River Flow Restoration programme of Madhya Pradesh

- **River rejuvenation programme** has been announced by the government for holistic water management through rain water harvesting and groundwater recharge. In the first phase of the programme, 40 rivers have been selected from 36 districts.
- SISDP large scale data has been used for generating micro-watershed based thematic layers and action plans for planning, management and monitoring of watershed development activities.
